FIIG Change List ..... 62

## GENERAL INFORMATION

### 1. Purpose and Scope

This Federal Item Identification Guide (FIIG) is a self-contained document for the collection, coding, transmittal, and retrieval of item characteristics and related supply management data for an item of supply for logistical use. This FIIG is to be used to describe items of supply identified by the index of approved item names appearing in this section.

### 2. Contents

This FIIG is comprised of the following:

- Index of Approved Item Names Covered by this FIIG
- Applicability Key Index
- Section I - Item Characteristics Data Requirements
- Section III - New text that should be here.
- Appendix A - Reply Tables
- Appendix B - Reference Drawing Groups (as applicable)
- Appendix C - Technical Data Tables (as applicable)

#### a. Index of Approved Item Names Covered by this FIIG:

The index lists the approved item names with definitions and item name codes as they appear in Cataloging Handbook H6, applicable to this FIIG. In addition, each name entry is assigned an applicability key for use in relating the characteristics requirements in Section I to the specific item name.

#### b. Applicability Key Index:

The purpose of this index is to provide the user with a ready reference for determining the specific requirements which are applicable to a given approved item name. This index lists all requirements in sequence as they appear in the FIIG. The applicability of a Master Requirement Coded requirement is indicated by the column headed by the specific item name applicability key as follows:

(1) The letter "X" indicates the requirement must be answered for a full descriptive item.

(2) The letters "AR" indicate the requirement is to be answered as required by (1) instructional notes within the FIIG; (2) when the reply is predicated on replies to a related main requirement; or (3) when an asterisk (\*) is used in conjunction with the applicability key column in Section I.

(3) A blank in the column indicates the requirement is not applicable to the specific item name.

c. Section I - Item Characteristics Data Requirements:

This section contains the physical and performance characteristics requirements needed to describe and identify an item of supply. These characteristics differentiate one item from all other items of supply and are to be used to meet the needs of all supported functions. This section is arranged in columns. Identification of each column and instructions pertinent thereto are as follows:

(1) Applicability Key:

The first column shows the applicability key(s) for each requirement. It indicates whether the requirement need be satisfied for the item being identified. "ALL" indicates that the requirement must be answered for all items covered by the FIIG. One or more alphabetic character(s) or group of one or more alphabetic characters indicates a response is required when describing items with an approved item name or names represented by the key(s). An asterisk (\*) used in conjunction with any applicability key indicates that the characteristic stated in the requirement may not be applicable to all items covered by the FIIG.

(2) Master Requirement Codes (MRC):

A four-position code which is assigned to a FIIG requirement for identification of the requirement, cross-referencing requirements in the various sections and appendices of the FIIG, and for mechanized processing and retrieval of FIIG generated data. Absence of a MRC for a requirement indicates a lead-in to requirements with individual MRCs in Appendix B.

(a) The coding technique for providing MULTIPLE/OPTIONAL responses will not be used for a Section I requirement assigned Mode Code A or L that leads to Appendix B sketches with dimensional requirements.

(b) Identified Secondary Address Coding:

This technique is for extending the Master Requirement Code so that a unique address is provided for each application of the requirement in relation to the item and is authorized only as instructed within the requirement. Responses coded through this technique will always consist of the following: (1) Master Requirement Codes, (2) indicator code (a single numeric character determined by the number of positions contained), (3) identified secondary address code (1 to 3-digit alphabetic codes determined by the number of predicted replies), (4) the mode code, (5) the reply code and/or clear text response, and (6) end with a record separator (\*). Steps (1) through (6) are repeated for each application of the requirement.

(c) AND/OR coding:

A technique for extending the Master Requirement Code to provide a distinctive address for multiple responses to the same requirement. Responses coded through this technique will always consist of (1) Master Requirement Code, (2) mode code, (3) the response or reply code (as instructed by the requirement), (4) a single dollar sign (\$) for an OR condition, or a double dollar sign (\$\$) for an AND condition, (5) the mode code, (6) the response or reply code

FIIG A094  
GENERAL INFORMATION

(followed by conditions (4) through (6) for each of the multiple responses) and (7) end with a record separator (\*). NOTE: Apply this technique only when instructed by the requirement sample reply (e.g.).

(3) Mode Code:

A one-position alphabetic code that specifies the manner in which a response will be prepared. Each requirement assigned a MRC is also assigned a mode code. Sample replies follow each FIIG requirement displaying the proper construction of a response for the assigned mode code. The response to a requirement will always be prepared in accordance with the assigned mode code and sample reply except in the following instances:

(a) Use of E Mode Code replies is not authorized. If a reply needed to describe an item is not listed in the applicable table, contact the FIIG Initiator.

(b) Mode Code K may not be used for any requirement unless instructed by the requirement instructions.

(4) Requirement:

This portion includes the characteristics data elements and data use identifiers required to identify and differentiate one item of supply from another, narrative definitions, and explanations as to use and method of expression. Instructions for coding and preparing replies are also provided.

(5) Reply Code:

A code that represents an established authorized reply to a requirement.

d. Section III - Supplementary Technical and Supply Management Data:

This section includes those characteristics requirements necessary to support specific logistics functions other than National Stock Number assignment.

e. Appendix A - Reply Tables:

Tables of authorized replies to requirements and reply codes when the tables are too lengthy for inclusion in Section I/III, when applicable.

f. Appendix B - Reference Drawings:

This appendix contains representative illustrations which portray specific variations of one or more generic characteristics. If reference drawings contain requirements pages to be used in conjunction with illustrations for dimensioning purposes, the requirements pages will contain Master Requirement Codes, mode codes, and a statement of the requirement. A response to requirements on a requirements page is necessary only for those Master Requirement Codes applicable to the illustration selected.

g. Appendix C - Technical Data Tables:

FIIG A094  
GENERAL INFORMATION

This appendix contains conversion charts and similar data pertinent to the requirements in Section I/III, when applicable.

3. Enter administrative MRC CLQL immediately following the last FIIG requirement reply, as instructed below:

| <u>MRC</u> | <u>Mode</u><br><u>Code</u> | <u>Requirement</u>  | <u>Example</u>         |
|------------|----------------------------|---|------------------------|
| CLQL       | G                          | COLLOQUIAL NAME (common usage name by which an item is known) | CLQLGWOVEN WIRE CLOTH* |

#### 4. Special Instructions and Indicator Definitions

##### a. Measurements:

Unless otherwise indicated within a requirement example, enter all measurements in decimal form, carried to the nearest three decimal places, with a minimum of one digit preceding the decimal. For SI (metric), enter all measurements with a minimum of one digit before and after the decimal. For fraction to decimal conversion, see Appendix C.

##### b. Indicators:

A cross hatch (#) following an AIN, MRC, Reply Code or Drawing Number indicates for "ALL EXCEPT USA" use only.

#### 5. Indexes

##### a. Index of Data Requirements

This index is arranged in alphabetic sequence by Master Requirement Code, cross-referenced to the applicable data requirement and page number(s).

##### b. Index of Approved Item Names

This index is arranged in alphabetic sequence referenced to Applicability Key.

##### c. Applicability Key Index

This index is arranged in Applicability Key Sequence.

#### 6. Maintenance

Requests for revisions and other changes will be directed to:

GENERAL INFORMATION  
INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

**INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG**

| <u>Approved Item Name</u> | <u>INC</u> | <u>App Key</u> |
|---------------------------|------------|----------------|
| LAMPHOLDER                | 16208      | A              |

An electric fitting primarily designed to electrically and mechanically accommodate a lamp. It may include an integral switch, transformer, or dropping resistor, provided these items control the lamp only. It does not include a shade, lens, reflector, or other item for modifying illumination. For items designed to mount on a CONDUIT OUTLET or JUNCTION BOX, see FIXTURE, LIGHTING.

|                     |       |   |
|---------------------|-------|---|
| LAMPHOLDER ASSEMBLY | 04585 | B |
|---------------------|-------|---|

Two or more lampholders having a common mounting or mounted on each other. It may include switches or dropping resistors, provided these items control the lamps only. Excludes FIXTURE, LIGHTING.

ALL

| NAME | D | ITEM NAME |
|------|---|-----------|
|------|---|-----------|

Definition: A NOUN, WITH OR WITHOUT MODIFIERS, BY WHICH AN ITEM OF SUPPLY IS KNOWN.

Reply Instructions: Enter the applicable Item Name Code from the index appearing in the General Information Section. (e.g., NAMED16208\*)

ALL

| STYL | L | STYLE DESIGNATOR |
|------|---|------------------|
|------|---|------------------|

Definition: THE STYLE DESIGNATION INDICATING THE CONFIGURATION THAT MOST NEARLY CORRESPONDS TO THE APPEARANCE OF THE ITEM.

Reply Instructions: Enter the applicable style designator from [Appendix B](#), Reference Drawing Group A. (e.g., STYLLA3\*)

When the assembly is composed of identical lampholders, enter one reply. (e.g., STYLLA3\*)

For an assembly which does not have the same holder style, enter a reply for each holder, using AND Coding entering in ascending sequence. (e.g., STYLLA3\$\$LA5\*).

Refer to Appendix C, Table 6 for AND Coding address print-out data.

NOTE FOR MRC AAFZ: REPLY TO MRC AAFZ ONLY WHEN STYLES A1 THRU A33, A42 THRU A46, AND A55 ARE ENTERED FOR MRC STYL.

ALL\* (See Note Above)

| AAFZ | D | BODY MATERIAL |
|------|---|---------------|
|------|---|---------------|

Definition: THE BASIC MATERIAL OF WHICH THE BODY IS FABRICATED.

Reply Instructions: Enter the applicable Reply Code from [Appendix A](#), Table 1. (e.g., AAFZDBR0000\*; AAFZDBR0000\$\$DBR0018\*; AAFZDBR0000\$DBR0018\*)

FIIG A094  
SECTION I

| APP<br>Key | MRC | Mode<br>Code | Requirements  |
|------------|-----|--------------|---|
|            |     |              | When the item is an assembly and the replies are identical, enter one reply. (e.g., AAFZDBR0000*)   |
|            |     |              | When the item is an assembly and has nonidentical holders; use AND Coding entering a separate reply for each style, in that sequence. (e.g., AAFZDBR0000\$\$DBB0000*) |
|            |     |              | For items with multiple or optional materials, use AND Coding and AND/OR coding. (e.g., AAFZDBR0000\$\$DBN0000*; AAFZDPC0000\$DBH0000*)                               |
|            |     |              | Refer to Appendix C, Table 6, for AND Coding address print-out data.  |

ALL\*

AEUG      D      SHELL MATERIAL

Definition: THE ELEMENT, COMPOUND, OR MIXTURE OF WHICH THE SHELL IS FABRICATED.

Reply Instructions: Enter the applicable Reply Code from [Appendix A](#), Table 1. (e.g., AEUGDBR0000\*; AEUGDBR0000\$\$DBR0018\*; AEUGDBR0000\$DBR0018\*)

When the item is an assembly and the replies are identical, enter one reply. (e.g., AEUGDBR0000\*)

When the item is an assembly and has nonidentical holders, use AND coding (\$\$) entering a separate reply for each style entered for MRC STYL, in that sequence. (e.g., AEUGDBR0000\$\$DBB0000\*; AEUGDBR0000\$DBB0000\*)

ALL\*

AFRU      D      SHELL SURFACE TREATMENT

Definition: CONSISTS OF PLATING, DIP, AND/OR COATING THAT CANNOT BE WIPED OFF. PLATING AND/OR COATING IS ANY CHEMICAL AND/OR METALLIC ADDITIVE, ELECTROCHEMICAL, OR MILD MECHANICAL PROCESS WHICH PROTECTS THE SHELL SURFACE.

Reply Instructions: Enter the applicable Reply Code from [Appendix A](#), Table 6. (e.g., AFRUDNFG000\*; AFRUDNFG000\$\$DAGE000\*; AFRUDNFG000\$DAGE000\*)

## NEMA\* DEFINITIONS OF QUALIFYING TERMS

NOTE: Definitions in the above list bearing the identification "C42" are selected from the group 95 definitions proposed by subcommittee 18 of sectional committee C42 for inclusion in the next edition of the "American Standard Definitions of Electrical Terms." Numbers at right of each definition refer to "American Standard Definitions of Electrical Terms," published by American Institute of Electrical Engineers, approved by \*\*American Standards Association. \*National Electrical Manufacturers Association \*\*Now American National Standards Institute (ANSI)

1. Acid-Resistant (C42) 95.91.165 Acid-resistant means so constructed that it will not be injured readily by exposure to acid fumes.
2. Dustproof (C42) 95.91.126 Dustproof means so constructed or protected that dust will not interfere with its successful operation.
3. Dust-tight (C42) 95.91.130 Dust-tight means so constructed that dust will not enter the enclosing case.
4. Fume-resistant (C42) 95.91.116 Fume-resistant means so constructed that it will not be injured readily by exposure to the specified fumes.
5. Moisture resistant (C42) 95.91.140 Moisture-resistant means so constructed or treated that it will not be injured readily by exposure to a moist atmosphere.
6. Oil-tight Oil-tight means so constructed that oil will not enter the enclosing case.
7. Rain-tight (C42) 95.91.175 Rain-tight means so constructed or protected that exposure to a beating rain will not result in the entrance of water.

8. Sleetproof (C42) 95.91.170 Sleetproof means so constructed or protected that the accumulation of sleet will not interfere with its successful operations.

9. Splashproof (C42) 95.91.160 Splashproof means so constructed and protected that external splashing will not interfere with its successful operation.

10. Submersible (C42) 95.91.148 Submersible means so constructed that it will operate successfully when submerged in water under specified conditions of pressure and time.

11. Water-tight Water-tight means provided with an enclosing case which will exclude water applied in the form of a hose stream under specified conditions.

12. Weatherproof (Outside Exposure) (C42) 95.91.186 Weatherproof means so constructed or protected that exposure to the weather will not interfere with its successful operation.

## HAZARDOUS LOCATION CLASSIFICATION

### CLASS I - LOCATIONS

"Class I locations are those in which flammable gases or vapors are or may be present in the air in quantities sufficient to produce explosive or ignitable mixtures." Class I includes the following groups:

GROUP A:

Atmospheres containing acetylene;

GROUP B:

Atmospheres containing hydrogen or gases or vapors of equivalent hazard such as manufactured gas;

GROUP C:

Atmospheres containing ethyl-ether vapor, ethylene, or cyclopropane;

GROUP D:

Atmospheres containing gasoline, hexane, naphtha, benzine, butane, propane, alcohol, acetone, lacquer solvent vapors, or natural

FIIG A094  
APPENDIX C

gas.

CLASS II - LOCATIONS

"Class II locations are those which are hazardous because of the presence of combustible dust." Class II locations include the following groups:

GROUP E:

Atmospheres containing metal dust, including aluminum, magnesium, and their commercial alloys;

GROUP F:

Atmospheres containing carbon black, coal or coke dust;

GROUP G:

Atmospheres containing flour, starch, or grain dust.

CLASS III - LOCATIONS

"Class III locations are those which are hazardous because of the presence of easily ignitable fibers or flyings; but in which such fibers or flyings are not likely to be in suspension in air in quantities sufficient to produce ignitable mixtures."

OUNCE TO DECIMAL OF A POUND CONVERSION CHART

| <u>OUNCES</u> | <u>POUNDS</u> |
|---------------|---------------|
| 1             | 0.062         |
| 2             | 0.125         |
| 3             | 0.188         |
| 4             | 0.250         |
| 5             | 0.312         |
| 6             | 0.375         |

SECONDARY ADDRESS CODING AND PRINT-OUT SEQUENCE

FIIG A094  
APPENDIX C

Print-out for secondary address code field indicators will be in accordance with the following table:

| <u>SECONDARY ADDRESS CODE FIELD INDICATOR</u> | <u>LAMPHOLDER</u>  |
|---|--------------------|
| 1A  | FIRST LAMPHOLDER   |
| 1B  | SECOND LAMPHOLDER  |
| 1C  | THIRD LAMPHOLDER   |
| 1D  | FOURTH LAMPHOLDER  |
| 1E  | FIFTH LAMPHOLDER   |
| 1F  | SIXTH LAMPHOLDER   |
| 1G  | SEVENTH LAMPHOLDER |
| 1H  | EIGHTH LAMPHOLDER  |
| 1J  | NINTH LAMPHOLDER   |
| 1K  | TENTH LAMPHOLDER   |

## **FIIG Change List**

FIIG Change List, Effective December 4, 2009

Removed SAC Coding from FIIG.

Updated MRC STYL to AND Coding and MRC AAFZ to AND/OR Coding.
